SUMMARY

Technical UI engineer with three years in Unity UI Toolkit, building every screen and a library of reusable custom controls for Melee Madness, a live multiplayer mobile game. Open to relocation.

SKILLS

Languages: Python, C#, JavaScript, TypeScript

Frontend & Engines: React, Unity, Unreal Engine (UMG), Unity UI Toolkit (UXML/USS), HTML5, CSS3, Figma

Backend & Data: FastAPI, REST APIs, PlayFab Economy V2, Firebase, Supabase, MongoDB, JSON, Postman

AI & Tooling: Node-based visual scripting (Unity Visual Scripting, Blueprints), LLM API integration, AI-assisted development (Claude Code), PyTorch + LeRobot, Google Apps Script, Git, GitHub

EXPERIENCE

Software Development Engineer I

Petals Studio

May 2023 – July 2026, Delhi NCR

- Built every UI screen for Melee Madness, a live multiplayer mobile game, in Unity UI Toolkit (UXML/USS), including shop, profile, showcase, match results, daily missions and leaderboard.
- Built the game's reusable UI Toolkit control library: a configurable glare CTA button, mesh-drawn linear gradients and box shadows, orientation and aspect-ratio layout controls, a carousel with autoplay, tabbed menus, a diagonal screen transition, render-texture previews, and font support for Arabic, Urdu, Bengali and Devanagari.
- Owned the PlayFab Economy V2 integration: modelled the weapon and combo catalog with bidirectional links, built bulk catalog-import tooling for weekly content drops and event items, and made the shop and combo screens render locked and unlocked content from live catalog and inventory data.
- Built a Google Apps Script pipeline that turns spreadsheet rows into validated JSON level configs and publishes them over a REST API, so non-technical admins could create and update levels without engineering help.
- Built the React frontend for Qzone, a quiz product (since shut down), with state management, REST API integration and dynamic question rendering.

Software Development Engineer Intern

Caravel.Tech

June 2022 – October 2022, Delhi NCR

- Sole programmer on a hyper-casual Tag game: built a fully working prototype in Unity and C# over the four-month internship, roughly 2,000 lines of C# code.
- Cut the game's build size by 25% through asset and code optimization.

PROJECTS

Roundtrip

Personal Project • roundtrip.one

- Built and launched a React PWA for group trip planning with shared itineraries, offline support, and live sync.
- Integrated an AI layer for LLM-generated itineraries and chat-based plan editing.

Robotics Policy Training - 22-day public LeRobot challenge

Personal Project • x.com/anmol_bajpai24

- Trained and evaluated robot manipulation policies in simulation against a frozen 500-episode eval: diffusion policy from scratch 39.8% vs. the pretrained reference at 61.0%.
- Built Human2Robot, a video-to-robot-replay pipeline: MediaPipe hand tracking turns human demonstration video into robot trajectories in gym-aloha.

EDUCATION

Bachelor of Technology in Computer Science

Manipal University Jaipur • Jaipur • 2024

• CGPA: 8.2.
